SOURCE: Elektrichestvo, no. 1, 1966, 85

TOPIC TAGS: electric engineering personnel, academic personnel, electric power plant, electric motor

ABSTRACT: Aleksey Konstantinovich Darmanchev graduated from the electromechanical faculty of the Leningrad Polytechnical Institute in 1925. He developed new rules for the connection of asynchronous motors to power supplies and investigated the loading conditions of power stations and systems between then and 1931. From 1935-1946, he was the head dispatcher of Lenenergo. He was the chief of the Moscow Combined Dispatcher Administration of Central Power Systems in 1946-7. He has also been active in higher education teaching, and is the author of an authoritative book on operative control of power systems. Orig. art. has: 1 figure. [JPRS]

Budapest, Orvosi Hetilap, Vol 104, No 12., 24 Mar 63, pages 535-541.

Abstract: [Authors' Hungarian summary modified] The authors carried out 30,000 bacteriological tests on 605 machines in 75 hospitals and other health centers of Budapest, 3000 laboratory model experiments and 100 inspections. They report on the state of the autoclaves and hot air sterilizers used as well as the results of simple boiling of instruments which is done routinely. The authors recommend a more widespread use of the autoclaves, the replacement of outdated sterilizers, courses for the technical personnel and the production and use of the Papin instrument boilers. 11 Hungarian, 40 Western references.

TITLE: Experimental investigation of microturbines for driving a generator

SOURCE: Ref. zh. Turbostroyeniye, Abs. 4.49.86

REF SOURCE: Tr. Kuybyshevsk. aviats. in-t, vyp. 22, 1965, 37-42

TOPIC TAGS: generator, axial flow turbine, gas turbine

ABSTRACT: The author gives data from experimental investigations of the effect which various structural parameters have on the economic indices of turbines with a power of less than 5 kw. The research was done on an active single-stage axial air turbine for driving a generator with a power of 1 kw with a theoretical speed of 30,000 rpm, an expansion ratio of 15, vanes on the working wheel with a height of 5 mm and an average diameter of 75 mm, and an intake ratio of 0.05.

TITLE: Severe bumping of aircraft caused by high-altitude atmospheric turbulence

SOURCE: Idojaras, no. 5, 1966, 294-298

TOPIC TAGS: ^{aeronautic}
~~aviation~~ meteorology, atmospheric turbulence, aircraft
bumping, *weather forecasting*

ABSTRACT: A detailed discussion is presented for the occurrence of high-altitude turbulence which caused severe aircraft bumping on the Budapest-Frankfurt-am-Main route. Various hypotheses on turbulence analysis developed in recent years are taken into consideration in an effort to give Hungarian aviation meteorologists better insight into this phenomenon and to formulate an approach to successful analysis of turbulence zones in everyday forecasting. "Endemic Outbreak of Canine Hepatitis (Rubarth's Disease) Among Bears."

Budapest, Acta Veterinaria Academiae Scientiarum Hungaricae, Vol XVI, No 4, 1966, pages 429-436.

Abstract: [English article, authors' English summary modified] An outbreak of infectious canine hepatitis was observed in the animal nursery of the Budapest Zoo in the spring of 1965. All of the 4-5 months old bear cubs died within about 2 weeks. Pathological and histological studies revealed that the most severe lesions had developed in the central nervous system and were manifested in the form of serous, hemorrhagic lymphocytic meningo-encephalitis. The Cowdry type A intranuclear inclusion bodies characteristic of Rubarth's disease were present in various organs, in the endothelial cells of blood vessels and sinusoids as well as in the parenchymal cells of the liver, in every case. The brain lesions were similar to those seen in foxes which died of encephalitis or occasionally in dogs which died of canine hepatitis. The results of serological tests and the timing of the outbreak both were indicative of a transmission of the infection from dingo puppies to the bear cubs which were housed together in the nursery. 1 East German, 7 Western 1/1 references. "On the Late Effects of Infectious Hepatitis in the Dog."

Budapest, Acta Veterinaria Academiae Scientiarum Hungaricae, Vol XVI, No 4, 1966, pages 437-454.

Abstract: [German article, author's German summary modified] Dogs were subjected to infection with Rubarth's disease and those 21 animals which survived the disease were observed for a prolonged period after which their organs were subjected to pathological anatomical and histological investigations. The organs of 102 additional exsanguinated dogs were also examined which had been infected and hyperimmunized with the infectious hepatitis and the distemper virus. The autopsy reports of the Veterinary Medical University were also checked for evidences of liver and kidney damage. These manifold studies failed to provide evidence that the acute infectious hepatitis would be followed by a chronic form or by liver cirrhosis. Among the dogs which survived infectious hepatitis, chronic cholecystitis was observed in many cases. Some views on the possible pathomechanism are presented. In the kidney of some of the dogs which survived infectious hepatitis, a sub-acute or chronic interstitial nephritis of varying severity could be observed, in agreement with some literature data. The results also indicate that the 1/2

"Osteopetrosis of the Hen."

Budapest, Magyar Allatorvosok Lapja, Vol 5, No 18, May 63, pp 190-195.

Abstract: [Author's English summary modified] Osteopetrosis was diagnosed on several cocks and hens by the author. Considerable bone enlargement was observed. The hens showed erythropenia with normal serum levels of calcium and phosphorus. After studying the skeletons, several forms of the disease were shown to be present. Hyperostosis, sclerosis, osteoclasia, porous osteodystrophia fibrosa were found. The course of the disease is described. It was characteristic that almost the whole skeletal system of the animal, bone marrow as well as periosteum were involved. Hyperplasia of the parathyroid was often shown to be present. Leucosis was not detected. Similarities with some diseases of the bone in men are mentioned. 1 Hungarian, the rest Western references.

"Immunological Activity of RNA Preparations Obtained by Phenol Extraction."

Warsaw, Medycyna Doswiadczalna i Mikrobiologia, Vol 18, No 2, 66, pp 189-192

Abstract [authors' Russian and English summaries, modified]: RNA preparation obtained from pig kidney by phenol extraction was tested for its immunogenic properties in rabbits. The rabbits were inoculated with RNA-tannin complex adsorbed on their own erythrocytes. No RNA antibodies could be detected in the sera of the inoculated rabbits by passive agglutination of coated erythrocytes and gel precipitation. The results obtained suggest that RNA preparation has no antigenic activity in the experimental system employed. Two Soviet-bloc and 11 Western references.

TITLE: Growing of crystals from high-melting materials with the aid of a microwave plasma burner

SOURCE: Experimentelle Technik der Physik, no. 2, 1965, 124-140

TOPIC TAGS: crystal growing, microwave plasma, microwave component, crystal growth, furnace, high temperature material, high temperature metal, melting furnace, melting plasma device

ABSTRACT: The construction of a microwave plasma burner system for the growing of single crystals from materials melting at high temperatures was described in detail and illustrated with drawings. Experiments for growing $\text{NiO/Fe}_2\text{O}_3$ crystals in various component ratios, and the characteristics of the crystals, were described. The crystal growth can be conducted under any suitable gas atmosphere. Generally, the device performed better than a hydrogen-oxygen burner furnace commonly employed for the same purpose. This work was carried out with the encouragement of Dr. Dietz and Dr. Voigt (DAW, Uena) of the Department of Technical Physics of the Physic Institute of KMU which is under the direction of Dr. W. Holzmüller. The author than

TITLE: Desulphurization of pig iron outside the blast furnace.
(Vnedomennoye obesserivaniye chuguna).

PERIODICAL: Metallurg, 1958, No.3, pp.3-6 (USSR).

ABSTRACT: The authors give diagrams (Fig.1) to show the various methods tried in the USSR and abroad for the external desulphurization of pig iron with soda, calcium carbide or other solid reagents. They suggest that their comparative neglect is due mainly to their relative inefficiency and low productivity. The French IRSID method they criticize on the additional grounds that it would be difficult to effect on a large scale, that special arrangements would be required for trapping the lime dust produced, that the finely divided reagent would be difficult to obtain and that nitrogen is not available at many works. They go on to describe a method developed at the Novo-Lipetskiy metallurgical works in which the liquid metal is treated with lime in a rotating vessel, coke being added to maintain a reducing atmosphere. B. Provotorov, A. Nikitin and L. Sidorin participated in this work. Experiments

Card 1/3

Desulphurization of pig iron outside the blast furnace. ^{130-3-2/21}

showed that the desulphurization process is affected by the fluidity of the metal, the quantities of solids added per unit weight of metal, the sizing of the solids and the speed of rotation of the vessel. The internal diameter of the experimental vessels (Fig.2) was 1050 mm and the length of the cylindrical part 1240 mm; one end was conical. With chrome-magnesite lining no build-up of slag on the walls or chemical disruption of the lining occurred. With speeds of rotation of 2.5 and 4.4 m/sec the sulphur content of the metal fell from 0.085 to 0.03-0.012%. The authors give a nomogram for determining the optimal speeds of rotation in relation to the viscosity of the metal and the vessel diameter, and this shows that the optimal speed for the experimental conditions was 9-10 m/sec which would have given more rapid desulphurization. The method is recommended to other works, the following being given as optimal conditions: lime with a minimal content of silica and carbon dioxide, under 1 mm in particle size and added in a quantity of 1% by weight of the iron; coke of particle size 1-3 mm to be added in a quantity of 0.3-0.5% of the weight of the iron; the entrance of slag or runner sand

into the vessel and the formation of encrustations on
the lining to be prevented. An editorial note says
that the Gipromez organization is designing a 100-ton
capacity vessel.
There are three figures.

Title : The Presence of Antitumoral Substances in Euphorbia amygdaloides. I. Investigations with Crocker's Tumor.

Orig Pub : Neoplasma, 1957, 4, No. 2, 125-131.

Abstract : Forty mice, inoculated with Crocker's sarcoma, were divided into 4 equal groups. Animals in group 1 received aqueous extract, the 2nd -- alcohol extract, and the 3rd -- ether extract, all of which were isolated from Euphorbia amygdaloides on an estimation of 40 mg of leaves to a mouse (the method of extraction is given). The 4th group was the control. Starting on the second day after inoculation the animals were treated for 24 days after inoculation the animals were treated for 24 days and then sacrificed. The most active group

TITLE: Gases in Metals (Gazy v metallakh)

PERIODICAL: V sb.: Uspekhi fiz. metallov. Nr 2, Moscow, Metallurgizdat, 1958, pp 177-247

ABSTRACT: Literature data of recent years are employed to investigate the reaction between gases (H_2 , O_2 , N_2 , inert gases, and gaseous halogens) and metals (primarily nonferrous and rare), the equilibrium in such a system, the diffusion and solubility of gases, the influence of dissolved gases on the physical and mechanical properties of the metals, the internal oxidation, and the liberation of gases upon the crystallization of the metals.

<p>Experiments on the preservation of urine. György Várallyay and Olyvinné Kapp (Növénytermesztési Kísérleti Intézet, Mosonmagyaróvár, Hungary). <i>Agrárudományi Szemle</i> 2, 100-14(1948).—Lab. expts. showed that air-tight closed containers give best results either with liquid urine or with urine absorbed by straw or peat. If urine was covered by a layer of used lubricating oil 0.05% of the original N content could be preserved during a storage for 5 months. Practically, a simple container of concrete when closed tightly or covered by an oil layer is effective for 3-4 months. Fully humified peat (as, e.g., the peat of Hanság near to Lake Fertő) proved to be less suitable as an absorbent for urine than imperfectly humified peat of Lake Balaton or common straw. In the saltpeter method of urine treatment the dosing of too much urine and the imperfect inhibition of drying caused significant N losses. If, e.g., 2.5 l. urine was absorbed by 1 kg. soil the loss on N amounted to 78% against 25% when 0.5 l. urine was used for 1 kg. soil.</p>										István Finály

New data on the treatment of liquid manure in manure
yards. György Várallyay and Oliverne Kapp. *Agroklimatika*
1, No. 8, 92 (1949). - Beds in stables were prepd. from
500 kg. soil contg. moisture 25, P_2O_5 0.101, and K_2O 0.214%
mixed with 50 kg. straw and 4 kg. superphosphate contg.
 P_2O_5 16.9%. The beds ($0.3 \times 1 \times 3$ m.) were irrigated
daily from Feb. 13 through May 3 with 5 l. liquid manure
contg. N 0.728, P_2O_5 0.1, and K_2O 1.0%. At the end of
this period the soil contained moisture 38%, N 0.166,
 P_2O_5 0.197, and K_2O 0.388%. The material balance of the
nutrients was: N, P_2O_5 , and K_2O introduced 1482, 1654,
5370 g., resp., and obtained in the product 3084, 1301, and
5348 g., resp. The loss in N content of liquid manure was
48.2%. The N of the product consisted of 15% ammonia
N and 24% nitrate N. István Földi

Title : Studies in the Detection of Toxoplasmosis in Domestic Animals. The Isolation of a Strain of Toxoplasma in Hungary.

Orig Pub : Magyar allatorv. lapja, 1957, 12, No 1-2, 17-22.

Abstract : As a result of the pathologico-anatomic and histologic investigation of 20 dead bodies of dogs which died with marked symptoms of the plague, encephalitis of toxoplasmic origin was detected in two dogs. Toxoplasma organisms were found in their brains. The authors are of the opinion that the virus of plague in dogs predisposes to toxoplasmosis, which often constitutes a complication of the plague. The pathologico-anatomic data regarding a cat and a rabbit, which died with the symptoms of paralysis
